Subject: Induced Seismicity Paper - briefing sheet
Attachments: Briefing Sheet - Minimizing and Managing Potential Impacts of Induced Seismicity from Class II Disposal Wells.docx

David – this is a briefing sheet that I had originally used in December to brief a Headquarters group looking at the Agency’s oil & gas associated activities. I updated it to reflect the most recent developments – the transfer of the draft to the National Technical Workgroup and the intention of the NTW to provide a finalized version to EPA in fulfillment of the 2011 charge from OW. I don’t have the format for the award nomination that Tom Ruiz mentioned at Senior Staff. But hope that this information could be translated into the appropriate format.

I know that Phil had worked on a write up for an award progress several months ago, but I do not have what was submitted at that time. I guess it was a preliminary step in the regional selection process.
